Pico Fight

GitHub Repo ^^

kelten wright - l3 - u.s.a - arizona

4 player arcade fight deck wired to two Raspberry Pi Picos acting as USB HID keyboards. All 4 players output keyboard inputs via two Picos, the volume rocker works as media keys, power switch puts the host machine to sleep, Works on Windows, Linux, RetroPie, and anything that accepts a USB keyboard hardware

The Picos are mapped to a standard 4 player MAME keyboard format, and all of the digital resources to make the project are available in the GitHub Repo
